PREFACE

I rather anticipate that superficial critics who do not like the argument of this essay will accuse it of pessimism, a charge which perhaps means little more than that they do not like it. Nevertheless, it may be worth while to point out, (1) that pessimism is not a logical objection to a contention of which the truth cannot otherwise be questioned, and (2) that though the argument of *Tantalus* may be said generally to corroborate that of *Daedalus* and *Icarus*, yet its conclusion is much less pessimistic than theirs, because (3) it makes it very plain that the evils which threaten the future of mankind are in no case unavoidable. If it is called

PREFACE

‘ pessimism ’ to point out the methods by which men may escape destruction, because men do not care to adopt them, I suppose it must be ‘ optimism ’ to rush violently and open-eyed down a precipice and to expect to be saved by a miracle. Certainly such would appear to be the belief upon which human affairs are at present conducted.

TANTALUS

PROLOGUE : THE ORACLE OF THE DEAD

When I read in Mr Haldane's *Daedalus* the wonderful things that Science was going to do for us, and in Mr Russell's *Icarus* how easily both we and it might come to grief in consequence, it at once became plain to me that of all the heroes of antiquity Tantalus would be the one best fitted to prognosticate the probable future of Man. For, if we interpret the history of Daedalus as meaning the collapse of Minoan civilization under the strain imposed on its

TANTALUS

moral fibre by material progress, and the fate of Icarus as meaning man's inability to use the powers of the air without crashing, one could gauge the probability that history would repeat itself still further, and that man would once more allow his vices to cheat him of the happiness that seemed so clearly within his reach.

I determined, however, to confirm this intelligent forecast by consulting Tantalus himself. To consult the oracle of a dead hero, it was, I knew, only necessary to undergo the process of 'incubation,' a sort of camping out on his tomb, in the skin of a sacrificial beast; and fortunately the tomb of Tantalus had just been discovered in Phrygia by the archæologists of the British School at Athens.

THE FUTURE OF MAN

I set out, therefore, with great promptitude, and in due course arrived at the ruins of the tomb of Tantalus. They did not much resemble a first-class hotel, and, of course, my idea of an 'incubation' was well laughed at, but I managed to find a pretty level corner, more or less sheltered from the wind. Here I wrapped myself up in my excellent rug, having decided to dispense with the more correct method of ensconcing myself in the gory hide of a sacrificial ox. The night was fine, though cold, and fortunately there were no mosquitoes, nor any of the other insects one would inevitably have encountered in the dwellings of the living. But the ground was very, very, hard, and I tossed about for hours, regretting my classical education and the psychi-

TANTALUS

cal researcher's rashness in trying foolish experiments.

At last I fell asleep—at least I suppose so. I also fell a great deal further. I seemed to go right through my rocky bed, and to fall down, down, down, interminably, through a sort of elastic space. When at last the not wholly unpleasant motion stopped, I found myself in a vast, grey, sandy plain, illuminated by a cold grey light as though of dawn. The only thing to catch the eye was a small round hummock, not very far from me. On it grew a mighty tree, with dark green pointed leaves and drooping branches, surrounded by a gleaming white fence or paling. I naturally walked towards it.

As I got near, I noticed that the

THE FUTURE OF MAN

white paling, which completely enclosed the hummock, was composed of *bones*, or rather of every imaginable sort of spine, tooth, and sting, garnished with the saws and swords of sawfish and swordfish, and all knit together into an impenetrable *cheval de frise* that prevented approach to the foot of the tree. The soil all round this strange hedge had apparently been trodden into deep mud by some creature that had walked round and round the tree, and the water required for its manufacture was supplied by a small spring which rose within the enclosure and flowed out through its interstices.

As I walked round the tree to the further side of the hummock, I came upon an extraordinary sight. I beheld a naked man trying to reach some of

TANTALUS

the fruit that dangled down from the outer branches of the tree but appeared to be just out of his reach, and so intent upon his design that he did not notice my approach. He seemed a tall man, and the upper part of his body was well formed. His features were good and regular, though somewhat hard, and not intellectual; his resolute jaw bespoke the man of action, accustomed to command and to be obeyed. So far, his appearance would have done credit to any modern captain of industry. But the lower half of his body appeared to be misshapen. His thighs were so curved that he could not walk upright, but had to stoop and lean forward as he slowly shambled along. Still more monstrous seemed the feet, with which he churned up the mud

THE FUTURE OF MAN

around the fence ; they were enormous and hardly seemed human in their shape, though they were too deeply plunged in the mud to permit one to see what exactly was wrong with them.

This strange being, whom the bold intuition of the dream-consciousness at once identified with Tantalus, was evidently trying to grasp the fruit that hung from the lower branches of the tree. For a while his efforts were vain, but then a gust of wind brought within his reach a large conical shining red fruit he had long coveted. It was one of the strange features of the tree that it was covered with fruit, and higher up also with flowers, of the most various sizes, shapes, and colours. He seized it triumphantly ; but the effect was surprising. For he had hardly

TANTALUS

touched it when it exploded, and covered him from head to foot with its blood-red juice. He at once sank senseless to the ground. But, after a while, he slowly recovered, and recommenced his old game. This time, he attacked a large round yellowish fruit ; but when he succeeded in seizing it, it too exploded, and poured out upon him volumes of a heavy yellow-green vapour. Again he collapsed, and this time his stupor lasted longer.

By the time he began to stir again I had, I thought, grasped the situation, and determined to intervene. So I drew near, and addressed him : “ Can I be mistaken in thinking that I see before me the far-famed hero, Tantalus, boon companion of the gods ? ” “ And their victim.” “ And what tree is

THE FUTURE OF MAN

this, I pray you, about which you busy yourself ? ” “ The Tree of Knowledge.” “ And the water, which you have trampled into mud, is what ? ” “ The Elixir of Life.” “ Then you seem to have all the materials for a happy life. Why don't you eat of the fruits of the tree, and drink of the elixir ? ” “ You have seen the results of my efforts.” “ I cannot but think you have been unfortunate in your choice of the fruits : there are many that look much better higher up.” “ And how am I to get at them ? ” “ Well, of course, you must break through all these *débris* of former animal life, which bar your access to the trunk of the tree, and prevent you from drinking of the water of life ; after that, you can climb up the tree, and pick the best of the

TANTALUS

fruits." "And how am I to break through the barrier of bones?" "Even though you appear to have no instruments, you can surely find a stone?" "Where shall I find a stone in the Plain of Forgetfulness? And besides, how should I climb the tree with these feet?" And he lifted up one of his monstrous limbs. "Certainly you seem to be pretty badly earth-bound," said I, "but I will try to find you some stones."

So off I set. I had not got far when a fierce blast struck me and peppered me with sand. I struggled stoutly against it, but was nearly choked. And then, suddenly, I awoke to find that day was dawning and that the wind had gone round to the north, and was blowing in my face. But I was well satisfied with

THE FUTURE OF MAN

my experiment. The interpretation of the response I had obtained from Tantalus was too plain to need the aid of a psycho-analyst.

I

Our best prophets are growing very anxious about our future. They are afraid we are getting to know too much, and are likely to use our knowledge to commit suicide, or rather, mutual murder, after the fashion of the Kilkenny cats.

To these dismal forecasts it is reasonable to reply that there is nothing novel in the present situation. The human race has always known enough to wreck itself, and its abounding folly has always inspired its wise men with the gravest apprehension for its future. Yet, either by chance or providence, it has always known also how to avoid destruction. It has never known enough to make itself happy; nor

THE FUTURE OF MAN

does it know enough to do so now. Its future has always been precarious because it has always been uncertain whether it would use its knowledge well or ill, to improve or to ruin itself. It has always had a choice between alternative policies, and it has so now.

What sense then is there in making such a fuss about the present crisis? It is a particularly plain case of the perennial choice of Hercules. What is needed is just a little clear thinking and plain speaking to a society more than usually debauched by a long regime of flattery, propaganda, and subterfuge. Mankind *can* make a fool of itself, as it always could; if it does, its blood will be on its own head. For it has knowledge enough to avoid the dangers that threaten it, if it will use its knowledge properly.

II

The first fact to be enunciated plainly, and faced, until it grows familiar, and its import is appreciated, is that, biologically speaking, Man has ceased to be a progressive species long ago. The evolutionary impetus which carried our ancestors from the level of the ape or even of the lemur, through such subhuman types as *Pithecanthropus*, and the Heidelberg and Neanderthal men, to 'modern' man, seems to have spent itself by the middle of the palæolithic period, *i.e.* say, thirty thousand years ago. At any rate, the Cro-Magnon people of the Aurignacian age, who then appeared upon the scene, were in no wise inferior to any subsequent race of men, either in stature or

THE FUTURE OF MAN

in brain capacity. They averaged six feet three inches in height, with one-sixth more brains than the modern European. So far indeed as their physical remains can indicate, they seem to have been very definitely the finest race of human beings that has ever existed. If we have improved on them, it has probably been only in such minor matters as resistance to the microbes of the many diseases which flourish among dense populations under slum conditions. Against that probability have to be set such certainties as that our toes and many of our muscles are being atrophied and that we are getting more liable to caries and baldness.

This remarkable fact of the arrest of his biological development is certain-

TANTALUS

ly the greatest mystery in the history of Man. It at once raises two further questions : In the first place, how did it happen, and what caused it ? And, secondly, what has enabled man, nevertheless, to progress in other respects, in knowledge, in power, and in culture ?

To answer the first question we cannot do better than argue back from what is now the most salient feature about man's biological position, namely that his survival is determined far more by his relations to the social group to which he belongs than by personal efficiency : hence he can draw on the collective resources of his tribe, and, to a growing extent, gets emancipated from the control of natural selection. Thus social selection and the survival of societies profoundly modify (and

THE FUTURE OF MAN

often defeat), the working of natural selection. The advantages are obvious ; it is no longer essential for a member of a society that collectively controls the conditions of existence to develop any high degree of personal capacity, in order to survive. A single wise and provident minister, like Joseph, is enough to keep alive millions of Pharaoh's subjects through the lean years of famine. But the inferior and incompetent survive with the rest.

Now, if we suppose that by mid-palæolithic times man had established his ascendancy over nature and perfected his social organization sufficiently to render these services to his fellows, we have suggested a possible cause of the cessation of biological progress. For social influences are as likely as not

TANTALUS

to be 'contra-selective,' that is, to tend to preserve by preference the stocks which are less viable from a merely biological point of view. They are markedly so at present, and it would be asking too much to expect the tribal chiefs of early men to have been wise and provident enough to see to it that their social institutions were eugenical in their effects. We cannot even now find such a pitch of wisdom and providence in the controllers of our destinies.

III

The answer to the second question is much easier. The human race has continued to progress in its culture, in its knowledge, in its power over nature, because it has devised institutions which have created for it a continuous social memory that defies death. Now, as ever, the wisest and the best must die, while their place is taken by babies born as ignorant and void of knowledge as in the beginning. Only there has been invented apparatus which relieves the civilized baby of his hereditary ignorance, and renders him potentially the heir to all the wisdom of the ages.

In the first place, *Language* not only extends enormously the possibilities of

TANTALUS

co-operation and common action, but also renders possible the consolidation of customs and their preservation by oral tradition. In the next place, *Writing* enables a society to record all that it considers worth remembering. Upon these two inventions may be reared vast intricate structures, religious, political, social, and scientific, which knit together and dominate human societies from generation to generation, and create the conditions for an almost mechanical accumulation of knowledge.

Man has thereby become an educable creature and fallen a victim to the arts of the examiner. Provided the mechanisms of education do not get out of gear, it is hard to set limits to the amounts of knowledge with which he can be crammed ; but it is clear that

THE FUTURE OF MAN

they are far greater than he could ever have acquired in a lifetime for himself. And as education (of sorts) has now become world wide, it might seem that the future of knowledge was now assured, and no longer liable to setbacks such as those due to the famous burning of the library of Alexandria at the command of the Caliph Omar, or the extinction of the only Greek scientists who seriously concerned themselves with the applications of science to life, of Archimedes and his School, in the sack of Syracuse. At any rate, it seemed clear that progress in knowledge could continue indefinitely, even in an otherwise stationary or decadent society.

Whoever argued thus would fail to make sufficient allowance for the

TANTALUS

perversity of human nature. Human institutions, like the human body, are ever tending to get clogged with the waste products of their own working. Hence, so far from performing the functions for which they were intended, they are constantly becoming the most formidable instruments for their frustration. Experience shows how easily Churches become the most effective deadeners of religious zeal, how often Law becomes the negation of justice, how deadly is the School to the inborn craving for knowledge which seemed to Aristotle so characteristic of man's nature.

Accordingly, no one familiar with the actual working of academic institutions is likely to fall into the error of pinning his faith to them. They are, of course,

THE FUTURE OF MAN

designed for the purpose of preserving and promoting the highest and most advanced knowledge hitherto attained : but do they anywhere fulfil this purpose ? Its execution must of necessity be left to professors not exempt from human frailty, always selected by more or less defective methods, whose interests by no means coincide with those of their subjects. The interest of the subject is to become more widely understood and so more influential. The interest of the professor is to become more unassailable, and so more authoritative. He achieves this by becoming more technical. For the more technical he gets, the fewer can comprehend him ; the fewer are competent to criticize him, the more of an oracle he becomes ; if, therefore, he wishes

TANTALUS

for an easy life of undisturbed academic leisure, the more he will indulge his natural tendency to grow more technical as his knowledge grows, the more he will turn away from those aspects of his subject which have any direct practical or human interest. He will wrap himself in mysteries of technical jargon, and become as nearly as possible unintelligible. Truly, as William James once exclaimed to me, apropos of the policy of certain philosophers, "the natural enemy of any subject is the professor thereof!" It is clear that if these tendencies are allowed to prevail, every subject must in course of time become unteachable, and not worth learning.

Thus educational systems become the chief enemies of education, and

THE FUTURE OF MAN

seats of learning the chief obstacles to the growth of knowledge, while in an otherwise stagnant or decadent society these tendencies sooner or later get the upper hand and utterly corrupt the social memory. The power of the professor is revealed not so much by the things he teaches, as by the things he fails or refuses to teach.

History is full of examples. How many religions have not perished from ritual sclerosis, how many sciences have not been degraded into pseudo-sciences or games ! Logic has been just examinable nonsense for over two thousand years. The present economic chaos in the world has been indirectly brought about by the policy adopted by the professors of economics forty or fifty years ago, to suit their

TANTALUS

own convenience. For they then decided that they must escape from the unwelcome attentions of the public by becoming more 'scientific'; *i.e.* they ceased to express themselves in plain language and took to mathematical formulae and curves instead; with the result that the world promptly relapsed into its primitive depths of economic ignorance. So soon as the professors had retired from it, every economic heresy and delusion, which had been exposed and uprooted by Adam Smith, at once revived and flourished. In one generation economics disappeared completely from the public ken and the political world, and the makers of the Peace Treaties of 1919 were so incapable of understanding an economic argument that

THE FUTURE OF MAN

not even the lucid intelligence of Mr Keynes could dissuade them from enacting the preposterous conditions which rendered impossible the realization of their aims.* Nor was it so very long ago that, in order to save the Mathematical Tripos at Cambridge, it had to be recast, because it had degenerated into an intellectual jig-saw puzzle, wholly unrelated to the applications of mathematics to the other sciences. To avoid jealousies, I hasten to add that the University of Oxford, which has organized itself as an asylum for lost causes, skilfully cultivates, by means of its classical and historical

* The most absurd perhaps was the clause, appearing in all the Peace Treaties, which made 'reparations' a first charge on all the assets of the defeated countries. This, of course, completely destroyed their credit, and incapacitated them from raising a loan, forcing them to have recourse to progressive inflation, and so into bankruptcy.

TANTALUS

studies, a backward-looking bias in its *alumni*. The true 'Greats' man is meant to go down indelibly imbued with the conviction that in matters of morals and politics nothing of importance has been discovered or said since Plato and Aristotle, and that nothing else matters.

Clearly then we cannot take for granted that in any society knowledge can progress without limits, nor can we count on our academic institutions to save us from stagnation and decay, even in matters of knowledge. All institutions are social mechanisms, and all mechanisms need a modicum of intelligent supervision, in the absence of which they become dangerous engines of destruction.

IV

✦ It appears then that we can extract no guarantee of progress either from the nature of Man or from the nature of human institutions. There is no *law* of progress, if by law be meant a superior power able to coerce the creatures that are said to 'obey' it. Neither can we extract from history any proof of the superiority of civilized man over his uncivilized ancestors. Such progress as has been attained has been achieved only by the active co-operation of the progressive organisms : every step has been fought for, and progress has ceased whenever

TANTALUS

effort ceased, or was switched off into different directions.

Consequently, modern man has no right to 'boast himself far better than his fathers'—in intrinsic quality. Intrinsically, *i.e.* apart from the effects of culture and social training, it is probable that he is slightly *inferior* in capacity to his own ancestors, while very markedly inferior to the great races of antiquity (like the Greeks) in their hey-day. Nor is there any reason to suppose that his moral nature has changed materially. Modern man may be a little tamer and better-tempered, because he has been herded together much more closely than primitive man, and city life, even in slums, demands, and produces, a certain urbanity.' For many generations

THE FUTURE OF MAN

those who would not pack tight and could not stand the strain of constantly exhibiting 'company manners' and accommodating their action to those of their fellows, must have fled away into the wilds, where they could be independent, or have eliminated themselves in other ways, *e.g.* by committing murder. It is probable that the social history of Iceland, settled as it was by unbridled individualists who would not brook any form of organized government, might throw some light on this process of taming the individual.

Nevertheless there is little doubt that, in the main, humanity is still Yahoo-manity. Alike in mentality and in *moral*, modern man is still substantially identical with his palæolithic ancestors. He is still the irrational,

TANTALUS

impulsive, emotional, foolish, destructive, cruel, credulous, creature he always was. Normally the Yahoo in him is kept under control by the constant pressure of a variety of social institutions ; but let anything upset an established social order, and the Yahoo comes to the front at once. The history of the past fifty years abundantly proves that man is still capable of atrocities equal to any in his record. Not only have we lived through the greatest political and the deadliest natural convulsion, the Great War and the Tokio earthquake, but the Russian Revolution has outdone the French, and Landru the legendary Bluebeard, while for mingled atrocity and baseness the murders of Rasputin and of Alexander of Serbia are unsurpassed in

THE FUTURE OF MAN

history. The painful truth is that civilization has not improved Man's moral nature. His moral habits are still mainly matters of custom, and the effect of moral theories is nugatory everywhere. Thus civilization is not even skin deep ; it does not go deeper than the clothes.

V

Clearly it is risky to expose the inelastic nature of so stubbornly conservative a creature to new conditions at a rapid rate. He may not be able to adapt himself quickly enough, and his old reactions, which did little or no harm before, may become extremely dangerous. Yet this is just what has happened. Science has exposed the palæolithic savage masquerading in modern garb to a series of physical and mental shocks which have endangered his equilibrium. It has also enormously extended his power and armed him with a variety of delicate and penetrating instruments which have

THE FUTURE OF MAN

often proved edge tools in his hands and which the utmost wisdom could hardly be trusted to use aright. Under these conditions the fighting instinct ceases to be an antiquated foible, like the hunting instinct, and becomes a deadly danger. No wonder the more prescient are dismayed at the prospect of the old savage passions running amok in the full panoply of civilization !

VI

Nor is this the final item in our tale of woe. A third and most sinister fact which has to be faced is that Civilization, as at present constituted, is very definitely a deteriorating agency, conducing to the degeneration of mankind. This effect of Civilization is nothing new, but has been operating, it would seem, from the beginning, though not probably as intensively as now: its discovery, however, is very recent. It is quite indirect, unintended, and fortuitous, but cumulative, and in the long run has probably been a chief cause in the decay of States and civilizations, as well as an important factor in the

THE FUTURE OF MAN

arrest of biological development which we have had to recognize.

A simple and easily observable sociological fact is at the bottom of the mischief. The different classes in a society have different birth-rates and death-rates, and the differences between these yield their several net rates of increase or decrease. Now, whereas under the conditions of savage life class differences can hardly exist or, at least cannot be accentuated, so that the whole tribe flourishes or perishes together, and among barbarians the upper classes have a very great advantage and the tribe recruits itself chiefly from the children of the chiefs, because the conditions of life are so severe that the lower classes are not able to rear many children ; in

TANTALUS

civilized societies these conditions are reversed. It is found that though both birth-rates and death-rates grow as we descend the social scale, so does the net rate of increase. Indeed, the highest or ruling class nowhere appears to keep up its numbers without considerable recruitment from below. So society, as at present organized, is always dying off at the top, and proliferating at the bottom, of the social pyramid.

The disastrous consequences of this sort of social organization may easily be apprehended, with a little reflection.

1) All societies, even those whose social structure is most rigid, have need of ability, discover it, and reward it by social promotion. But (2) as this promotion means passing into a class with a relatively inadequate rate of repro-

THE FUTURE OF MAN

duction, the biological penalty attaching to social promotion is racial extinction. Thus (3) the ultimate reward of merit is sterilization, and society appears to be an organization devoted to the suicidal task of extirpating any ability it may chance to contain, by draining it away from any stratum in which it may occur, promoting it into the highest, and there destroying it. It is exactly as though a dairyman should set in motion apparatus for separating the cream from the milk, and then, as it rose, skim it off, and throw it away ! *

At present it is calculated that the highest classes in the chief civilized societies only reproduce themselves to the extent of fifty per cent. of their number in each generation, so that the

TANTALUS

hereditary ability of half of them is lost in each generation. But even then the remainder is largely wasted. It is churned into froth and scum by social forces. For neither now nor at any time has social intelligence shown itself equal to devising a training for the youth of the highest classes that would provide them with adequate stimuli to develop their faculties, and to lead a strenuous life of social service. The children of the rich are tempted to live for 'society' in the narrower sense, which means frittering away one's life on a round of vacuous amusement; and they rarely resist the temptation.

Naturally it is difficult to trace the accumulation of ability in the upper social strata which is theoretically to be expected. On the other hand, in

THE FUTURE OF MAN

some subjects at any rate, the symptoms of a world-wide dearth of ability are becoming unmistakable. The Great War, though it made abundantly manifest the prevalence of incompetents in high places, did not reveal the existence either of a great general or of a great statesman anywhere.

It is superfluous to insist either on the fatuity of a social organization such as this, or on the certainty of racial degeneration which it entails: but it may be well to draw attention to the *rapidity* with which these degenerative processes are at present sapping the vitality and value of our civilized races. The failure to reproduce does not, as in former times, affect merely the aristocracy in the highest social strata; it has spread to the whole of the pro-

TANTALUS

fessional and middle classes, and to most classes of skilled labour. It is not too much to say that, with the exception of the miners, none of the desirable elements in the nation are doing their bit to keep up the population, and that its continued growth is mainly due to the unrestrained breeding of the casual labourers and the feeble-minded.

In the rest of the population its increase is checked by birth-control and the postponement of marriage, neither of which affects the undesirables. They are too stupid, reckless, and ignorant to practise the former, and have nothing to gain by the latter. Also, to make it quite certain that they shall form a true 'proletariate,' the wisdom of our rulers ordains that a knowledge of birth-control shall be a

THE FUTURE OF MAN

(fatal) privilege reserved for the intelligent and well-to-do. They instruct the police to prevent it from penetrating to the poor and stupid—apparently from the mistaken idea that the State needs plenty of cheap labour and cheap cannon-fodder. So child-bearing remains compulsory for the wretched women of the poor, whereas elsewhere only those women produce children who desire them, and natural selection is thus allowed gradually to eliminate the temperament of the unwilling (and, therefore, probably less competent) mother.

The dysgenic effects of this class-discrimination are further intensified by other tendencies : (1) The advance of medicine and hygiene has enormously diminished selective mortality in all

TANTALUS

classes, and improved the chances of weaklings to survive and leave descendants. (2) The advance of philanthropy preserves them, especially in the lower classes, where formerly the mortality was largely selective and a high death-rate both counteracted an excessive birth-rate and increased the value of the survivors. The emotional appeal of 'baby-saving' goes so directly to the heart of civilized man that his head never reflects whether the particular baby is worth saving, and whether a baby from a different breed and with a better pedigree would not be better worth having. (3) Modern obstetrics save the lives of thousands of women, whose physique is such that in former times they would inevitably have died in child-birth. The result is

THE FUTURE OF MAN

that child-birth is becoming more difficult. Also babies brought up on the bottle, which has an irresistible attraction for microbes of all sorts, are apt to be less healthy than those nourished in the more primitive manner.

(4) Lastly, the bastardizing, which used formerly to provide for a considerable infusion of the blood of the upper classes into the lower, has now practically ceased. Since the merry days of King Charles II, very few noble families of royal descent have been added to the peerage.

VII

Our civilization, therefore, carries within it the seeds of its own decay and destruction, and it does not require high prophetic gifts to predict the future of a race which goes the way marked out for it by such perversely suicidal institutions. It cannot improve, but must degenerate, and the only question would seem to be whether the decadence of Man will leave him viable as a biological species. At present it looks very much as though his blind leaders would lead their blinder followers from catastrophe to catastrophe, through imperialist world-wars to class-wars and to race-wars : but even if, by some miraculous rally of human intelli-

THE FUTURE OF MAN

gence, these convulsions should be averted, the prospect will not really be improved. The violent destruction of the human race by war will only be more *dramatic*: it will not be more *fatal* than its gradual decay as its arts and sciences slowly fossilize, or peter out, in an overwhelming flood of feeble-mindedness.

VIII

This is the one alternative. We shall get to it, if we go on as we are going : but it is not our doom. The alternative is to exorcize the danger by an adequate reform of human nature and of human institutions. This again seems attainable in at least two ways.

The first, and more paradoxical, of these would make a direct frontal attack on the palæolithic Yahoo, and try to bring about his moral reformation. The means for this purpose are ready to hand. Christian ethics have been in being, as a moral theory, for nearly two thousand years. If the Yahoo could be really christianized, he would at any rate cease to cut his own

THE FUTURE OF MAN

throat in cutting his neighbour's. And it is astonishing how much scientific support is forthcoming for the paradoxes of Christian ethics. It is an^d historical fact that the meek have a knack of inheriting the earth after their lords and masters have killed each other off, and that passive resistance wears out the greatest violence, and conscientious objection defeats the craftiest opportunism, if only you can get enough of them. It is a biological fact that the rabbit survives better than the tiger ; and the same would appear to be true of the human ' rabbit ' , and the Nietzschean ' wild beast.' Intrinsically, therefore, Christian ethics might be well worth trying.

I wish I could believe it likely that this policy will be tried. But the palæolithic

TANTALUS

Yahoo has been dosed with Christian ethics for two thousand years, and they have never either impressed or improved him. Their paradoxes give him a moral shock, and he has not brains enough to grasp their rationality. He will exclaim rather with the gallant admiral in the House of Commons, when justly indignant at the unheard-of notion that a 'moral gesture' of a Labour Government might be the best policy, "Good God, sir, if we are to rely for our air security on the Sermon on the Mount, all I can say is, '*God help us*'!" Besides, the proposal to put Christian principles into practice would be bitterly opposed by all the Churches in Christendom.*

* This does *not* mean, of course, that there are no Christians in the Churches, but only that they are not in control of these institutions.

THE FUTURE OF MAN

It may be more prudent, therefore, to try a safer though slower way, that of the eugenical reform and reconstruction of our social organization. As to the possibilities in this direction, I incline to be much more hopeful than either Mr Haldane or Mr Russell. Mr Haldane despises eugenics, because he is looking for the more spectacular advent of the 'ectogenetic baby,' to be the Saviour of mankind. But he might not arrive, or be seriously delayed in transmission, or fail to come up to Mr Haldane's expectations ; and, meanwhile, we cannot afford to wait.

Mr Russell distrusts eugenics, because he fears that any eugenical scheme put into practice will be 'nobbled' by our present ruling rings, and perverted into an instrument to consolidate their

TANTALUS

power. He thinks that dissent from dominant beliefs and institutions will be taken as proof of imbecility, and sterilized accordingly,* and that the result would merely be to spread over all the world the hopeless uniformity and commonplaceness of the ideals and practice of the American business man, as depicted by Mr Sinclair Lewis.

This prognostication would be very plausible, if we supposed eugenics to be introduced into the social structure from above, privily, and in small doses, and by way of administrative order, as under the existing Acts to check the spread of feeble-mindedness.

But this method would be impracticable. It would not generate anything like the social momentum necessary to

!carus, p. 49.

THE FUTURE OF MAN

carry through any radical reform. To make it effective, it would have to be backed by a powerful, enthusiastic, and intelligent public sentiment. This presupposes that the public has been biologically educated to appreciate the actual situation, and has been thoroughly wrought up about the fatuity of our social order, and understands what is wrong with it. If it understands that much, it can also be made to see that it is fantastic to expect to leap to the Ideal State by a social revolution. No one now knows what the institutions of an Ideal State would be like, nor how they would work. We only know that they will have to be evolved out of our present institutions, even as the Superman has to be evolved out of the primitive Yahoo. In either

TANTALUS

case, the process will be gradual, and its success will depend upon details, on taking one step after another at the right rate in the right direction, making a new adjustment here, overcoming an old difficulty there, removing obstacles, smoothing over the shell-holes and scars dating from Man's lurid past, and, in general, feeling one's way systematically and scientifically to better things. Such a mode of progression may seem unheroic, but it has the great advantage that it is unlikely to go irretrievably wrong. If we know from the outset that we are tentatively feeling our way, we shall always be on the look out for traps and possibilities of going astray, trying out the value of our policies by their results, and willing to retrace our

THE FUTURE OF MAN

steps when we have made a false one.

The social temper, therefore, will become far more intelligent and reasonable than it has been hitherto. It will be slow to dogmatize, and will regard the *toleration* of differences of opinion as among the cardinal principles of a sanely progressive social order. For as we can no longer assume, with Plato and the other Utopians, that *perfection* may be postulated, provision has always to be made for the *improvement* of the social order. It can never be accepted as absolutely good, but must always be regarded as capable, in principle, of being bettered. Even the best of established institutions are only good relatively to the alternatives to which they showed themselves superior : under changed

TANTALUS

conditions they may become inferior, and may fail us, or ruin us, if we do not make haste to transform them into something better fitted to the new conditions. Hence the social order must be *plastic*, and must never be allowed to grow rigid. There must always be room in it for experiments that have a reasonable prospect of turning out to be improvements. For progress will depend on the timely adoption of such novelties.

But society has no means of commanding them at will. It has to wait till they occur to some one. As biological variations have to arise spontaneously before they can be selected, so valuable new ideas have to occur in a human mind before they can be tried and approved. Society

THE FUTURE OF MAN

cannot originate discoveries, it can only refrain from so organizing itself as to stamp them out when they occur. It is vitally necessary, therefore, that we should beware of suppressing variations, whether of thought or of bodily endowment, that may prove to be valuable.

Also, of course, we shall have to realize that our whole procedure is *essentially experimental*, and all that this implies. We do not know, at the outset, what would be the best obtainable type, either of man or of society; true, but we mean to find out. Nor is it unreasonable to expect to do so as we go along. We start with a pretty shrewd suspicion that certain types, say the feeble-minded, the sickly, the insane, are undesirable, and that

TANTALUS

no good can come of coddling and cultivating them: we similarly are pretty sure that certain other types, say the intelligent, healthy, and energetic, are inherently superior to the former. We try, therefore, to improve and increase the better types. How precisely, and how most effectively, we do not quite know, though we can make pretty good preliminary guesses. So we try. That will entail experimentation in a variety of directions, with 'control experiments,' and a modicum of mistakes. But our mistakes will not be fatal, because if we advance tentatively and with intelligent apprehension, we shall realize them in time, and shall not feel bound to persist in any course that yields unsatisfactory results.

It is really one of the great advan-

THE FUTURE OF MAN

tages of eugenics that it cannot proceed upon any cut-and-dried scheme, but will have to be guided by the results of experiment and the fruits of experience, each of which will be followed and discussed by an intensely interested public. For the difficulties of eugenics are all difficulties of detail, and intelligent attention to detail may overcome them all. Thus the dysgenical working of civilized society, which has come about unintentionally through the unfortunate convergence of a number of tendencies, may be altered similarly, by changing the incidence of social forces.

IX

If scientific eugenics can put a stop to the contra-selection incidental to civilization, Man will recover the plasticity and the progressiveness he once possessed, and will be able to evolve further—in whatever direction seems to him best. We need not take alarm at this possibility, for with his superior knowledge he may surely be trusted to make a better job of his evolution than the *Lemur* and the *Pithecanthropus*, who were our progenitors and managed to evolve into modern man.

But the process will necessarily be a slow one, even though a comprehensive scheme of eugenics will be providing simultaneously *two* sources of improve-

THE FUTURE OF MAN

ment, by the elimination of defectives at the bottom of the social scale, and by the increase of ability at the top. As, moreover, time presses, and sheer destruction may overtake us before eugenics have made much difference, it would be highly desirable if some means could be found to accelerate the change of heart required. For this purpose, I am much less inclined to put my trust in the advance of pharmacology than Mr Haldane and Mr Russell.* Hitherto new drugs have only meant new vices, sometimes (like cocaine) of so fascinating a character as to distract the whole police force from their proper function of repressing crime. So it seems legitimate to be very sceptical about moral transforma-

cf. *Daedalus*, p. 34 ; *Icarus*, p. 54.

TANTALUS

tion scenes to be wrought by pills and injections.

On the other hand there does seem to be a science from the possible progress of which something of a sensational kind might not unreasonably be expected. It is, moreover, the science most directly concerned with affairs of this sort. Psychology, the science of human mentality, is, by common consent, in a deplorably backward state. It has remained a ground for metaphysical excursions and a playground for the arbitrary pedantries of classificatory systematists. Its efforts to become scientific have only led it to ape assumptions and to borrow notions found to be appropriate in sciences with widely different problems and objects. The results, as the

THE FUTURE OF MAN

psychologists themselves confess, are meagre and disappointing ; which, of course, only proves that the borrowed notions are inappropriate and incapable of making Psychology into an effective science. But if psychologists should take it into their heads to settle down to business, to recognize the primary obligation of every science to develop methods and conceptions capable of working upon its subject-matter, and so tried to authenticate their 'truth' after the ordinary fashion of the other sciences, namely by the pragmatic test of successful working, some surprising effects might be elicited even from the actual human mind.

For there is reason to suppose that its present organization is very far from being the best of which it is

TANTALUS

capable. It has come about in a very haphazard manner, and we are not at present making anything like an adequate use of all our powers. Hence by changing the gearing and re-arranging the traditional coupling, so to speak, of our faculties, improvements might conceivably be wrought which would seem to us to border on the miraculous. Thus a pragmatically efficient Psychology might actually invert the miracle of Circe, and really transform the Yahoo into a man.

X

I have endeavoured in this very summary sketch to show that the doom of Tantalus is by no means unconditional, and that he can save himself if he chooses, and that by no superhuman effort, but merely by recognizing facts that are right before his nose and well within his comprehension, and by a little clear thinking upon their import. But I would not presume to predict that he *will* save himself : history affords no unambiguous guide. It seems to show that something worse and something better than what actually happens is always conceivable, and that neither our hopes nor our fears are ever fully

TANTALUS

realized. If so, poor Tantalus, hoping against hope, fearing against reason, may muddle along for a good while yet, without repeating either his ancient error of imagining that he could sup with the gods, or his modern folly of using his reason, as Goethe's Mephistopheles declared, only to become more bestial than any beast !

SIXTY VOLUMES ARE NOW PUBLISHED

TO-DAY AND TO-MORROW

Each, fott 8vo, boards, 2/6 net

THIS series of books, by some of the most distinguished English thinkers, scientists, philosophers, doctors, critics, and artists, was at once recognized as a noteworthy event. Written from various points of view, one book frequently opposing the argument of another, they provide the reader with a stimulating survey of the most modern thought in many departments of life. Several volumes are devoted to the future trend of Civilization, conceived as a whole; while others deal with particular provinces. It is interesting to see in these neat little volumes, issued at a low price, the revival of a form of literature, the Pamphlet, which has been in disuse for many years.

TO-DAY AND TO-MORROW

FROM THE REVIEWS

Times Literary Supplement: "An entertaining series of vivacious and stimulating studies of modern tendencies."

Spectator: "Scintillating monographs . . . that very lively and courageous series."

Observer: "There seems no reason why the brilliant To-day and To-morrow Series should come to an end for a century of to-morrows. At first it seemed impossible for the publishers to keep up the sport through a dozen volumes, but the series already runs to more than two score. A remarkable series . . ."

Daily Telegraph: "This admirable series of essays, provocative and brilliant."

Nation: "We are able to peer into the future by means of that brilliant series [which] will constitute a precious document upon the present time."—*T. S. Eliot*.

Manchester Dispatch: "The more one reads of these pamphlets, the more avid becomes the appetite. We hope the list is endless."

Irish Statesman: "Full of lively controversy."

Daily Herald: "This series has given us many monographs of brilliance and discernment. . . . The stylistic excellencies of this provocative series."

Field: "We have long desired to express the deep admiration felt by every thinking scholar and worker at the present day for this series. We must pay tribute to the high standard of thought and expression they maintain. As small gift-books, austere yet prettily produced, they remain unequalled of their kind. We can give but the briefest suggestions of their value to the student, the politician, and the voter. . . ."

New York World: "Holds the palm in the speculative and interpretative thought of the age."

TO-DAY AND TO-MORROW

VOLUMES READY

Daedalus, or Science and the Future.
By J. B. S. HALDANE, Reader in
Biochemistry, University of Cambridge.
Seventh impression.

"A fascinating and daring little book."
—*Westminster Gazette*. "The essay is brilliant,
sparkling with wit and bristling with
challenges."—*British Medical Journal*.

"Predicts the most startling changes."
—*Morning Post*.

Callinicus, a Defence of Chemical War-
fare. By J. B. S. HALDANE. *Second
impression.*

"Mr Haldane's brilliant study."—*Times
Leading Article*. "A book to be read by every
intelligent adult."—*Spectator*. "This brilliant
little monograph."—*Daily News*.

Icarus, or the Future of Science. By
BERTRAND RUSSELL, F.R.S. *Fourth
impression.*

"Utter pessimism."—*Observer*. "Mr
Russell refuses to believe that the progress
of Science must be a boon to mankind."—
Morning Post. "A stimulating book, that
leaves one not at all discouraged."—*Daily
Herald*.

What I Believe. By BERTRAND RUSSELL,
F.R.S. *Third impression.*

"One of the most brilliant and thought-
stimulating little books I have read—a better
book even than *Icarus*."—*Nation*. "Simply
and brilliantly written."—*Nature*. "In
stabbing sentences he punctures the bubble of
cruelty, envy, narrowness, and ill-will which
those in authority call their morals."—*New
Leader*.

TO-DAY AND TO-MORROW

Tantalus, or the Future of Man. By F. C. S. SCHILLER, D.Sc., (Fellow of Corpus Christi College, Oxford. *Second impression.*

"They are all (*Daedalus, Icarus, and Tantalus*) brilliantly clever, and they supplement or correct one another."—*Dean Inge, in Morning Post.* "Immensely valuable and infinitely readable."—*Daily News.* "The book of the week."—*Spectator.*

Cassandra, or the Future of the British Empire. By F. C. S. SCHILLER, D.Sc.

"We commend it to the complacent of all parties."—*Saturday Review.* "The book is small, but very, very weighty; brilliantly written, it ought to be read by all shades of politicians and students of politics."—*Yorkshire Post.* "Yet another addition to that bright constellation of pamphlets."—*Spectator.*

Quo Vadimus? Glimpses of the Future. By E. E. FOURNIER D'ALBE, D.Sc., *Second Impression.*

"A wonderful vision of the future. A book that will be talked about."—*Daily Graphic.* "A remarkable contribution to a remarkable series."—*Manchester Dispatch.* "Interesting and singularly plausible."—*Daily Telegraph.*

Thrasymachus, the Future of Morals. By C. E. M. JOAD, author of "The Babbitt Warren," etc. *Second impression.*

"His provocative book."—*Graphic.* "Written in a style of deliberate brilliance."—*Times Literary Supplement.* "As outspoken and unequivocal a contribution as could well be imagined. Even those readers who dissent will be forced to recognize the admirable clarity with which he states his case. A book that will startle."—*Daily Chronicle.*

TO-DAY AND TO-MORROW

Lysistrata, or Woman's Future and Future Woman. By ANTHONY M. LUDOVICI, author of "A Defence of Aristocracy," etc. *Second Impression.*

"A stimulating book. Volumes would be needed to deal, in the fullness his work provokes, with all the problems raised."—*Sunday Times*. "Pro-feminine but anti-feministic."—*Scotsman*. "Full of brilliant common-sense."—*Observer*.

Hypatia, or Woman and Knowledge. By MRS BERTRAND RUSSELL. With a frontispiece. *Third impression.*

An answer to *Lysistrata*. "A passionate vindication of the rights of woman."—*Manchester Guardian*. "Says a number of things that sensible women have been wanting publicly said for a long time."—*Daily Herald*.

Hephaestus, the Soul of the Machine. By E. E. FOURNIER D'ALBE, D.Sc.

"A worthy contribution to this interesting series. A delightful and thought-provoking essay."—*Birmingham Post*. "There is a special pleasure in meeting with a book like *Hephaestus*. The author has the merit of really understanding what he is talking about."—*Engineering*. "An exceedingly clever defence of machinery."—*Architects' Journal*.

The Passing of the Phantoms: a Study of Evolutionary Psychology and Morals. By C. J. PATTEN, Professor of Anatomy, Sheffield University. With 4 Plates.

"Readers of *Daedalus*, *Icarus* and *Tantalus*, will be grateful for an excellent presentation of yet another point of view."—*Yorkshire Post*. "This bright and bracing little book." *Literary Guide*. "Interesting and original."—*Medical Times*.

TO-DAY AND TO-MORROW

The Mongol in our Midst : ⁵ a Study of Man and his Three Faces. By F. G. CROOKSHANK, M.D., F.R.C.P. With 28 Plates. *Second Edition, revised.*

"A brilliant piece of speculative induction."
—*Saturday Review*. "An extremely interesting and suggestive book, which will reward careful reading."—*Sunday Times*. "The pictures carry fearful conviction."—*Daily Herald*.

The Conquest of Cancer. By H. W. S. WRIGHT, M.S., F.R.C.S. Introduction by F. G. CROOKSHANK, M.D.

"Eminently suitable for general reading. The problem is fairly and lucidly presented. One merit of Mr Wright's plan is that he tells people what, in his judgment, they can best do, *here and now*."—From the *Introduction*.

Pygmalion, or the Doctor of the Future. By R. MCNAIR WILSON, M.B.

"Dr Wilson has added a brilliant essay to this series."—*Times Literary Supplement*. "This is a very little book, but there is much wisdom in it."—*Evening Standard*. "No doctor worth his salt would venture to say that Dr Wilson was wrong."—*Daily Herald*.

Prometheus, or Biology and the Advancement of Man. By H. S. JENNINGS, Professor of Zoology, Johns Hopkins University. *Second Impression.*

"This volume is one of the most remarkable that has yet appeared in this series. Certainly the information it contains will be new to most educated laymen. It is essentially a discussion of . . . heredity and environment, and it clearly establishes the fact that the current use of these terms has no scientific justification."—*Times Literary Supplement*. "An exceedingly brilliant book."—*New Leader*.

TO-DAY AND TO-MORROW

Narcissus : an Anatomy of Clothes. By GERALD HEARD. With 19 illustrations.

"A most suggestive book."—*Nation*.
"Irresistible. Reading it is like a switchback journey. Starting from prehistoric times we rocket down the ages."—*Daily News*.
"Interesting, provocative, and entertaining."—*Queen*.

Thamyris, or Is There a Future for Poetry? By R. C. TREVELYAN.

"Learned, sensible, and very well-written."—*Affable Hawk*, in *New Statesman*. "Very suggestive."—*J. C. Squire*, in *Observer*.
"A very charming piece of work, I agree with all, or at any rate, almost all its conclusions."—*J. St Loe Strachey*, in *Spectator*.

Proteus, or the Future of Intelligence. By VERNON LEE, author of "Satan the Waster," etc.

"We should like to follow the author's suggestions as to the effect of intelligence on the future of Ethics, Aesthetics, and Manners. Her book is profoundly stimulating and should be read by everyone."—*Outlook*. "A concise, suggestive piece of work."—*Saturday Review*.

Timotheus, the Future of the Theatre. By BONAMY DOBRÉE, author of "Restoration Drama," etc.

"A witty, mischievous little book, to be read with delight."—*Times Literary Supplement*. "This is a delightfully witty book."—*Scotsman*. "In a subtly satirical vein he visualizes various kinds of theatres in 200 years' time. His gay little book makes delightful reading."—*Nation*.

TO-DAY AND TO-MORROW

Paris, or the Future of War. By Captain
B. H. LIDDELL HART.

"A companion volume to '*Callinicus*. A gem of close thinking and deduction."—*Observer*. "A noteworthy contribution to a problem of concern to every citizen in this country."—*Daily Chronicle*. "There is some lively thinking about the future of war in *Paris*, just added to this set of live-wire pamphlets on big subjects."—*Manchester Guardian*.

Wireless Possibilities. By Professor
A. M. Low. With 4 diagrams.

"As might be expected from an inventor who is always so fresh, he has many interesting things to say."—*Evening Standard*. "The mantle of Blake has fallen upon the physicists. To them we look for visions, and we find them in this book."—*New Statesman*.

Perseus : of Dragons. By H. F. SCOTT
STOKES. With 2 illustrations.

"A diverting little book, chock-full of ideas Mr Stokes' dragon-lore is both quaint and various."—*Morning Post*. "Very amusingly written, and a mine of curious knowledge for which the discerning reader will find many uses."—*Glasgow Herald*.

Lycurgus, or the Future of Law. By
E. S. P. HAYNES, author of "Concerning Solicitors," etc.

"An interesting and concisely written book."—*Yorkshire Post*. "He roundly declares that English criminal law is a blend of barbaric violence, medieval prejudices and modern fallacies. . . . 'A humane and conscientious investigation.'"—*T.P.'s Weekly*. "A thoughtful book—deserves careful reading."—*Law Times*.

TO-DAY AND TO-MORROW

Euterpe, or the Future of Art. By LIONEI. R. MCCOLVIN, author of "The Theory of Book-Selection."

"Discusses briefly, but very suggestively, the problem of the future of art in relation to the public."—*Saturday Review*. "Another indictment of machinery as a soul-destroyer . . . Mr Colvin has the courage to suggest solutions."—*Westminster Gazette*. "This is altogether a much-needed book."—*New Leader*.

Pegasus, or Problems of Transport. By Colonel J. F. C. FULLER, author of "The Reformation of War," etc. With 8 Plates.

"The foremost military prophet of the day propounds a solution for industrial and unemployment problems. It is a bold essay . . . and calls for the attention of all concerned with imperial problems."—*Daily Telegraph*. "Practical, timely, very interesting and very important."—*J. St. Loe Strachey, in Spectator*.

Atlantis, or America and the Future. By Colonel J. F. C. FULLER.

"Candid and caustic."—*Observer*. "Many hard things have been said about America, but few quite so bitter and caustic as these."—*Daily Sketch*. "He can conjure up possibilities of a new Atlantis."—*Clarion*.

Midas, or the United States and the Future. By C. H. BRETHERTON, author of "The Real Ireland," etc.

A companion volume to *Atlantis*. "Full of astute observations and acute reflections . . . this wise and witty pamphlet, a provocation to the thought that is creative."—*Morning Post*. "A punch in every paragraph. One could hardly ask for more 'meat.'"—*Spectator*.

TO-DAY AND TO-MORROW

Nuntius, or Advertising and its Future.

By GILBERT RUSSELL.

"Expresses the philosophy of advertising concisely and well."—*Observer*. "It is doubtful if a more straightforward exposition of the part advertising plays in our public and private life has been written."—*Manchester Guardian*.

Birth Control and the State: a Plea and a Forecast. By C. P. BLACKER, M.C., M.A., M.R.C.S., L.R.C.P.

"A very careful summary."—*Times Literary Supplement*. "A temperate and scholarly survey of the arguments for and against the encouragement of the practice of birth control."—*Lancet*. "He writes lucidly, moderately, and from wide knowledge; his book undoubtedly gives a better understanding of the subject than any other brief account we know. It also suggests a policy."—*Saturday Review*.

Ouroboros, or the Mechanical Extension of Mankind. By GARET GARRETT.

"This brilliant and provoking little book."—*Observer*. "A significant and thoughtful essay, calculated in parts to make our flesh creep."—*Spectator*. "A brilliant writer, Mr Garrett is a remarkable man. He explains something of the enormous change the machine has made in life."—*Daily Express*.

Artifex, or the Future of Craftsmanship.

By JOHN GLOAG, author of "Time, Taste, and Furniture."

"An able and interesting summary of the history of craftsmanship in the past, a direct criticism of the present, and at the end his hopes for the future. Mr Gloag's real contribution to the future of craftsmanship is his discussion of the uses of machinery."—*Times Literary Supplement*.

TO-DAY AND TO-MORROW

Plato's American Republic. By J. DOUGLAS WOODRUFF. *Fourth impression.*

"Uses" the form of the Socratic dialogue with devastating success. A gently malicious wit sparkles in every page."—*Sunday Times*.
"Having deliberately set himself an almost impossible task, has succeeded beyond belief."—*Saturday Review*. "Quite the liveliest even of this spirited series."—*Observer*.

Orpheus, or the Music of the Future. By W. J. TURNER, author of "Music and Life." *Second impression.*

"A book on music that we can read not merely once, but twice or thrice. Mr Turner has given us some of the finest thinking upon Beethoven that I have ever met with."—*Ernest Newman* in *Sunday Times*. "A brilliant essay in contemporary philosophy."—*Outlook*. "The fruit of real knowledge and understanding."—*New Statesman*.

Terpander, or Music and the Future. By E. J. DENT, author of "Mozart's Operas."

"In *Orpheus* Mr Turner made a brilliant voyage in search of first principles. Mr Dent's book is a skilful review of the development of music. It is the most succinct and stimulating essay on music I have found. . . ."—*Musical News*. "Remarkably able and stimulating."—*Times Literary Supplement*. "There is hardly another critic alive who could sum up contemporary tendencies so neatly."—*Spectator*.

Sibylla, or the Revival of Prophecy. By C. A. MACE, University of St. Andrew's.

"An entertaining and instructive pamphlet."—*Morning Post*. "Places a nightmare before us very ably and wittily."—*Spectator*. "Passages in it are excellent satire, but on the whole Mr Mace's speculations may be taken as a trustworthy guide . . . to modern scientific thought."—*Birmingham Post*.

TO-DAY AND TO-MORROW

Lucullus, or the Food of the Future. By OLGA HARTLEY and MRS C. E. LEVEL, authors of "The Gentle Art of Cookery."

"This is a clever and witty little volume in an entertaining series, and it makes enchanting reading."—*Times Literary Supplement*. "Opens with a brilliant picture of modern man, living in a vacuum-cleaned, steam-heated, credit-furnished suburban mansion 'with a wolf in the basement'—the wolf of hunger. This banquet of epigrams."—*Spectator*.

Procrustes, or the Future of English Education. By M. ALDERTON PINK. "Undoubtedly he makes out a very good case."—*Daily Herald*. "This interesting addition to the series."—*Times Educational Supplement*. "Intends to be challenging and succeeds in being so. All fit readers will find it stimulating."—*Northern Echo*.

The Future of Futurism. By JOHN RODKER.

"Mr Rodker is up-to-the-minute, and he has accomplished a considerable feat in writing on such a vague subject, 92 extremely interesting pages."—*T. S. Eliot*, in *Nation*. "There are a good many things in this book which are of interest."—*Times Literary Supplement*.

Pomona, or the Future of English. By BASIL DE SÉLINCOURT, author of "The English Secret", etc.

"The future of English is discussed fully and with fascinating interest."—*Morning Post*. "Full of wise thoughts and happy words."—*Times Literary Supplement*. "His later pages must stir the blood of any man who loves his country and her poetry. *J. C. Squire*, in *Observer*. "His finely-conceived essay."—*Manchester Guardian*.

TO-DAY AND TO-MORROW

Balbus, or the Future of Architecture.

By CHRISTIAN BARMAN.

"A really brilliant addition to this already distinguished series. The reading of *Balbus* will give much data for intelligent prophecy, and incidentally, an hour or so of excellent entertainment."—*Spectator*. "Most readable and reasonable. We can recommend it warmly."—*New Statesman*. "This intriguing little book."—*Connoisseur*.

Apella, or the Future of the Jews. By A QUARTERLY REVIEWER.

"Cogent, because of brevity and a magnificent prose style, this book wins our quiet praise. It is a fine pamphlet, adding to the value of the series, and should not be missed."—*Spectator*. "A notable addition to this excellent series. His arguments are a provocation to fruitful thinking."—*Morning Post*.

The Dance of Çiva, or Life's Unity and Rhythm. By COLLUM.

"It has substance and thought in it. The author is very much alive and responsive to the movements of to-day."—*Spectator*. "A very interesting account of the work of Sir Jagadis Bose."—*Oxford Magazine*. "Has caught the spirit of the Eastern conception of world movements."—*Calcutta Statesman*.

Lars Porsena, or the Future of Swearing and Improper Language. By ROBERT GRAVES. *Third impression.*

"Goes uncommonly well, and deserves to."—*Observer*. "Not for squeamish readers."—*Spectator*. "No more amusingly unexpected contribution has been made to this series. A deliciously ironical affair."—*Bystander*. "His highly entertaining essay is as full as the current standard of printers and police will allow."—*New Statesman*. "Humour and style are beyond criticism."—*Irish Statesman*.

TO-DAY AND TO-MORROW

Socrates, or the Emancipation of Mankind. By H. F. CARLILL.

"Devotes a specially lively section to the herd instinct."—*Times*. "Clearly, and with a balance that is almost Aristotelian, he reveals what modern psychology is going to accomplish."—*New Statesman*. "One of the most brilliant and important of a remarkable series."—*Westminster Gazette*.

Delphos, or the Future of International Language. By E. SYLVIA PANKHURST.

"Equal to anything yet produced in this brilliant series. Miss Pankhurst states very clearly what all thinking people must soon come to believe, that an international language would be one of the greatest assets of civilization."—*Spectator*. "A most readable book, full of enthusiasm, an important contribution to this subject."—*International Language*.

Gallio, or the Tyranny of Science. By J. W. N. SULLIVAN, author of "A History of Mathematics."

"So packed with ideas that it is not possible to give any adequate *résumé* of its contents."—*Times Literary Supplement*. "His remarkable monograph, his devastating summary of materialism, this pocket *Novum Organum*."—*Spectator*. "Possesses a real distinction of thought and manner. It must be read."—*New Statesman*.

Apollonius, or the Future of Psychical Research. By E. N. BENNETT, author of "Problems of Village Life," etc.

"A sane, temperate and suggestive survey of a field of inquiry which is slowly but surely pushing to the front."—*Times Literary Supplement*. "His exposition of the case for psychic research is lucid and interesting."—*Scotsman*. "Displays the right temper, admirably conceived, skilfully executed."—*Liverpool Post*.

TO-DAY AND TO-MORROW

Aeolus, or the Future of the Flying Machine. By OLIVER STEWART.

"Both his wit and his expertness save him from the nonsensical-fantastic. There is nothing vague or sloppy in these imaginative forecasts."—*Daily News*. "He is to be congratulated. His book is small, but it is so delightfully funny that it is well worth the price, and there really are sensible ideas behind the jesting."—*Aeroplane*.

Stentor, or the Press of To-Day and To-Morrow. By DAVID OCKHAM.

"A valuable and exceedingly interesting commentary on a vital phase of modern development."—*Daily Herald*. "Vigorous and well-written, eminently readable."—*Yorkshire Post*. "He has said what one expects any sensible person to say about the 'trustification' of the Press."—*Spectator*.

Rusticus, or the Future of the Countryside. By MARTIN S. BRIGGS, F.R.I.B.A.

"Few of the 50 volumes, provocative and brilliant as most of them have been, capture our imagination as does this one."—*Daily Telegraph*. "The historical part is as brilliant a piece of packed writing as could be desired."—*Daily Herald*. "Serves a national end. The book is in essence a pamphlet, though it has the form and charm of a book."—*Spectator*.

Janus, or the Conquest of War. By WILLIAM McDUGALL, M.B., F.R.S.

"Among all the booklets of this brilliant series, none, I think is so weighty and impressive as this. It contains thrice as much matter as the other volumes and is profoundly serious."—Dean Inge, in *Evening Standard*. "A deeply interesting and far-minded study of the causes of war and the possibilities of their prevention. Every word is sound."—*Spectator*.

TO-DAY AND TO-MORROW

Vulcan, or the Future of Labour. By
CECIL CHISHOLM.

"Of absorbing interest."—*Daily Herald*. "No one, perhaps, has ever condensed so many hard facts into the appearance of agreeable fiction, nor held the balance so nicely between technicalities and flights of fancy, as the author of this excellent book in a brilliant series. *Vulcan* is a little book, but between its covers knowledge and vision are pressed down and brimming over."—*Spectator*.

Hymen, or the Future of Marriage. By
NORMAN HAIRE.

This candid and unprejudiced survey inquires why the majority of marriages to-day seem to be so unsatisfactory, and finds the answer in the sexual ethic of our civilization which is ill adapted to our social and economic needs. The problems of sex-morality, sex-education, prostitution, in-breeding, birth-control, trial-marriage, and polygamy are all touched upon.

The Next Chapter: the War against the Moon. By ANDRÉ MAUROIS, author of 'Ariel', etc.

This imaginary chapter of world-history (1951-64) from the pen of one of the most brilliant living French authors mixes satire and fancy in just proportions. It tells how the press of the world is controlled by five men, how world interest is focussed on an attack on the moon, how thus the threat of world-war is averted. But when the moon retaliates . . .

TO-DAY AND TO-MORROW

Galatea, or the Future of Darwinism.

By W. RUSSELL BRAIN.

This non-technical but closely-reasoned book is a challenge to the orthodox teaching on evolution known as Neo-Darwinism. The author claims that, although Neo-Darwinian theories can possibly account for the evolution of forms, they are quite inadequate to explain the evolution of functions.

Scheherazade, or the Future of the English Novel. By JOHN CARRUTHERS.

A survey of contemporary fiction in England and America lends to the conclusion that the literary and scientific influences of the last fifty years have combined to make the novel of to-day predominantly analytic. It has thus gained in psychological subtlety, but lost its form. How this may be regained is put forward in the conclusion.

Caledonia, or the Future of the Scots.

By G. M. THOMSON.

Exit the Scot! Under this heading the Scottish people are revealed as a leaderless mob in whom national pride has been strangled. They regard, unmoved, the spectacle of their monstrous slum-evil, the decay of their industries, the devastation of their countryside. This is the most compact and mordant indictment of Scottish policy that has yet been written.

Albyn, or Scotland and the Future. By C. M. GRIEVE, author of 'Contemporary Scottish Studies', etc.

A vigorous answer, explicit and implicit, to *Caledonia*, tracing the movements of a real Scottish revival, in music, art, literature, and politics, and coming to the conclusion that there is a chance even now for the regeneration of the Scottish people.

TO-DAY AND TO-MORROW

Lares et Penates, or the Future of the Home. By H. J. BIRNSTINGL.

All the many forces at work to-day are influencing the planning, appearance, and equipment of the home. This is the main thesis of this stimulating volume, which considers also the labour-saving movement, the 'ideal' house, the influence of women, the servant problem, and the relegation of aesthetic considerations to the background. Disconcerting prognostications follow.

NEARLY READY

Archon, or the Future of Government. By HAMILTON FYFE.

A survey of the methods of government in the past leads the author to a consideration of conditions in the world of to-day. He then indicates the lines along which progress may develop.

Hermes, or the Future of Chemistry. By T. W. JONES, B.Sc., F.C.S.

Chemistry as the means of human emancipation is the subject of this book. To-day chemistry is one of the master factors of our existence; to-morrow it will dominate every phase of life, winning for man the goal of all his endeavour, economic freedom. It may also effect a startling change in man himself.

The Future of Physics. By L. L. WHYTE.

The last few years have been a critical period in the development of physics. We stand on the eve of a new epoch. Physics, biology, and psychology are converging towards a scientific synthesis of unprecedented importance whose influence on thought and social custom will be so profound as to mark a stage in human evolution. This book interprets these events and should be read in connexion with *Gallo*, by J. W. N. Sullivan, in this series.

TO-DAY AND TO-MORROW

Ikonoclastes, or the Future of Shakespeare. By HUBERT GRIFFITHS

Taking as text the recent productions of classical plays in modern dress, the author, a distinguished dramatic critic, suggests that this is the proper way of reviving Shakespeare and other great dramatists of the past, and that their successful revival in modern dress may perhaps be taken as an indication of their value.

IN PREPARATION

Bacchus, or the Future of Wine. By P. MORTON SHAND.

Mercurius, or the World on Wings.
By C. THOMPSON WALKER.

The Future of Sport. By G. S. SANDILANDS.

The Future of India. By T. EARLE WELBY.

The Future of Films. By ERNEST BETTS.
